ASSIGNMENT NO. 1

UNIT III

Inheritance, Polymorphism, Exception Handling and Multithreading

1. Explain superclass and subclass in Java. Write a program to demonstrate different types of inheritance supported by Java.

2. Write a Java program to demonstrate constructor execution in inheritance using super() and explain the order of constructor invocation.

3. Explain method overriding and dynamic method binding in Java with a suitable program.

4. What are abstract classes and abstract methods? Write a Java program demonstrating their use.

5. Explain final methods and final classes in Java with suitable examples.

6. Explain the different types of exceptions in Java. Write a program demonstrating try, catch, finally, throw, and throws.

7. Write a Java program to demonstrate multiple catch blocks and nested try statements.

8. Explain the Java Thread Model. Write a program to create and execute multiple threads.

9. Explain different ways of creating a thread in Java with suitable programs.

10. Write a Java program demonstrating multithreading using the Thread class and Runnable interface.
